Hewlett-Packard\* 5.1.10.1175 (2009 7 28 )

():

VeriSign\* G2 Root Certificate hash added to Legacy AMT

():

When using Intel® AMT with Kerberos Authentication, after 25 continuous days with the Intel® Manageability Engine (Intel® ME) in the M0/M1 state, the IT console loses the ability to manage this system due to a Kerberos authentication failure. The exposure is limited to provisioned platforms using Intel® AMT with Kerberos Authentication enabled.

EAP-FAST-MSChapv2 and PEAP-MSChapv2 Intel AMT 802.1x authentication fails with Cisco ACS 5.0 EAP-TLS in AMT ignores the "domain" field.

AMT rejects chain of certificate from client side if the key size of one of the immediate certificate is 4K.

Kerberos: users with ticket size bigger than 4Kb fail to pass Kerberos authentication.

When opening a SOL or IDER session in a Kerberos environment, the action fails with an Authentication Error if the Kerberos ticket is larger than 3Kbytes.

Lenovo\* 4.1.11 (2009 7 28 )

():

When using Intel® AMT with Kerberos Authentication, after 25 continuous days with the Intel® Manageability Engine (Intel® ME) in the M0/M1 state, the IT console loses the ability to manage this system due to a Kerberos authentication failure. The exposure is limited to provisioned platforms using Intel® AMT with Kerberos Authentication enabled.

When opening a SOL or IDER session in a Kerberos environment, the action fails with an Authentication Error if the Kerberos ticket is larger than 3Kbytes.

The Kerberos authentication fails when the Kerberos ticket size is bigger than 4Kbytes
